Volume 38

Antelope Valley Astronomy Club Newsletter

May 2018

Up-Coming Events

- May 5: Prime Desert Moon Walk
- May 11: Club Meeting*
- May 12: Dark Sky Star Party
- May 19: <u>Lunar Club</u>
- May 24-26: <u>RTMC Camp Oakes</u>
- May25: AVAC Outreach Program

* Monthly meetings are held at the S.A.G.E. Planetarium in Palmdale, the second Friday of each month. The meeting location is at the northeast corner of Avenue R and 20th Street East. Meetings start at 7 p.m. and are open to the public. *Please note that food and drink are not allowed in the planetarium*

President

Frank Moore

"Long stormy spring-time, wet contentious April, winter chilling the lap of very May; but at length the season of summer does come." - Thomas Carlyle

Well my friends, is it just me or does everyone else think we're kind of having fits and starts getting warmed up for our observing season? Through most of April, and though we were occasionally teased with a partially clear day or night, it seemed like we always had some cloud cover and one form or another of inclement weather. It seems that May is starting off the same way.

The Prime Desert Woodland Moonwalk on Saturday April 7 was no exception as we were teased by drifting clouds and generally poor viewing conditions. Still, the seven club members on hand were able to share a few deep space objects as well as Jupiter and four of its moons with 35 members of the public.

On the following Saturday, April 14, the conditions for our Messier Marathon, at Saddleback Butte State Park, were much butter but we were still teased by clouds which moved in and out throughout the night. We had an estimated 30 people in attendance with no fewer than ten telescopes of various shapes and sizes. Unfortunately, as people came and went (or just stayed and went to bed) at various times throughout the night, I never got an official count as to how many Messier Objects each observer bagged. For members who were there and observing, I would appreciate if you could send me a quick email telling me how many Messier Objects you observed on that night, April 14, and also for all members who have been working on your Messier List please send me a note telling me how many Messier Objects you have "bagged" in total. If you have also been working on other catalog lists, like NGC, Herschel, Caldwell or others, please let me know your totals on those as well.

Our final event for the month of April was the College of the Canyons Spring Star Party, on Friday April 27 at the Canyon Country Campus. Rose and I were unable to attend, since we were in Lincoln City, OR for our son Aaron's wedding, and we really appreciate the members who stepped up to represent the AVAC at this event. These included Darrell Bennett with his 12" Meade SCT, Rod Girard with his 9.25" Celestron

2

Desert Sky Observer

SCT and MallinCam and monitor, Kris, Chris and Suzy Chase with their 12" Meade Lightbridge dob, and Ellen Mahler with her 6" Orion dob.

As for Rose and I, our son had the perfect Oregon wedding at the Connie Hanson Gardens in Lincoln City. I say "Perfect Oregon wedding" in that it poured rain for the entire day of the wedding and into that night. After the ceremony, the wedding party ventured out into the botanical gardens where umbrellas were featured prominently as functional props in the official wedding photos. The bride and groom posed with umbrellas in various photos, they were held over the bride and groom in others, and one "umbrella holder" was assigned to keep the official photographer and her equipment dry as well. It was all taken in stride and, all in all, it was a great ceremony and a fun time.

Coming up in the month of May we have a Prime Desert Woodland Moonwalk at 8:00 pm on Saturday May 5, our monthly meeting on Friday May 11, a Lunar Observing session at Judy Fuentes' house in Antelope Acres on Saturday May 19, and our two day and night outreach event at Red Rock Canyon State Park on Memorial Day Weekend.

As for our Memorial Day Weekend event at Red Rock Canyon State Park, as was the case for the same event last year CA State Parks will be providing us with Campsites 1 and 2 for our Star Party location and the bulk of the members attending without RV's. The club will pay for additional campsites as needed with my hope that I will be able to secure Campsites 3 and 4, as we did last year, and perhaps even Campsite 5. I will be arriving on Thursday night to secure the additional campsites and begin setup at the Star Party site. Public star parties will be held on the nights of Friday May 25 and Saturday May 26 and we will have solar observing throughout both days. I will be conducting an interpretive program with PowerPoint, held in the Outdoor Amphitheater, on the night of Saturday May 26. Additional details will be sent as we get closer to the date.

If you plan on attending the Red Rock Canyon event, just for a day, overnight, or both nights, please let me know ASAP so I can start planning space requirements. Let me know days/nights of attendance, number of persons coming, type of accommodations (vehicle, tent, or RV) and whether or not you will be setting up a telescope.

As many of you may know, the annual Riverside Telescope Makers Conference and Astronomy Expo (RTMC) is being held at YMCA Camp Oakes in Big Bear on the same weekend. While members are certainly welcome to attend RTMC, in lieu of our event, the AVAC will not be having an "official' presence there.

Secretary

Rose Moore

Thank you members for supporting our last meeting and club events. We had a good turnout for the meeting with our guest speaker Alejandro Osorio, from NASA/JPL's UAVSAR program!! Also, we had a good turnout for our Messier Marathon at Saddleback Butte State Park! I only viewed a few more of the Messier objects for my list......but we

don't know who viewed the most. Was it Matt Leone again? Also many thanks to Chris Chase (and others?) who helped Inga Nagel with setting up her pop up trailer at Saddleback!!

Thank you Rod, Darrell, Ellen, Ann, Jeremy, and Chris, Kris, and Suzy Chase for supporting the College of the Canyons event on April 27th!

We have a Prime Desert Woodland Moon Walk on Saturday May 5th at 8pm. Weather permitting. We'll need members with telescopes to help support this event!

3

Desert Sky Observer

On Friday, May 11th we have a club meeting. We have as a **possible** speaker Chris Butler, renowned artist, speaker, educator, and astronomer. His topic will be 'From Nine Planets to Nine Billion Worlds'. Chris contacted me last week and he has been selected as a juror and is on jury duty. He did not know if he would be done with the case in time to do our presentation. If he doesn't make it to this meeting, we will be rescheduling him for another meeting.

We will have a Lunar Club meeting at Judy Fuentes home on Saturday May 19th at 7pm. Weather permitting. Further details to follow.

Also this month is our solar observing and star party at Red Rock Canyon State Park on Memorial Day weekend. Frank will also be presenting a short talk in the outdoor amphitheater for the public. There will be a full moon, but there will be several planets to observe as well as some of the brighter dark sky objects. More info to follow from Frank.

Clear skies!

Space Place

What's It Like Inside Mars?

By Jessica Stoller-Conrad

Mars is Earth's neighbor in the solar system. NASA's robotic explorers have visited our neighbor quite a few times. By orbiting, landing and roving on the Red Planet, we've learned so much about Martian canyons, volcanoes, rocks and soil. However, we still don't know exactly what Mars is like on the inside. This information could give scientists some really important clues about how Mars and the rest of our solar system formed.

This spring, NASA is launching a new mission to study the inside of Mars. It's called Mars InSight. InSight—short for Interior Exploration using Seismic Investigations, Geodesy and Heat Transport—is a lander. When InSight lands on Mars later this year, it won't drive around on the surface of Mars like a rover does. Instead, InSight will land, place instruments on the ground nearby and begin collecting information.

Just like a doctor uses instruments to understand what's going on inside your body, InSight will use three science instruments to figure out what's going on inside Mars.

One of these instruments is called a seismometer. On Earth, scientists use seismometers to study the vibrations that happen during earthquakes. InSight's seismometer will measure the vibrations of earthquakes on Mars—known as marsquakes. We know that on Earth, different materials vibrate in different ways. By studying the vibrations from marsquakes, scientists hope to figure out what materials are found inside Mars.

InSight will also carry a heat probe that will take the temperature on Mars. The heat probe will dig almost 16 feet below Mars' surface. After it burrows into the ground, the heat probe will measure the heat coming from the interior of Mars. These measurements can also help us understand where Mars' heat comes from in the first place. This information will help scientists figure out how Mars formed and if it's made from the same stuff as Earth and the Moon.

Scientists know that the very center of Mars, called the core, is made of iron. But what else is in there? InSight has an instrument called the Rotation and Interior Structure Experiment, or RISE, that will hopefully help us to find out.

4

Desert Sky Observer

Although the InSight lander stays in one spot on Mars, Mars wobbles around as it orbits the Sun. RISE will keep track of InSight's location so that scientists will have a way to measure these wobbles. This information will help determine what materials are in Mars' core and whether the core is liquid or solid.

InSight will collect tons of information about what Mars is like under the surface. One day, these new details from InSight will help us understand more about how planets like Mars-and our home, Earth-came to be.

For more information about earthquakes and marsquakes, visit: https://spaceplace.nasa.gov/earthquakes

News Headlines

Stellar Dust Survey Paves Way for Exoplanet Missions

Using the Large Binocular Telescope Interferometer, or LBTI, on Mount Graham in Arizona, the HOSTS survey determines the brightness of warm dust floating in the orbital planes of other stars (called exozodiacal dust). In particular, HOSTS has studied dust in nearby stars' habitable zones, where liquid water could exist on the surface of a planet. The LBTI is five to 10 times more sensitive than the previous telescope capable of detecting exozodiacal dust, the Keck Interferometer Nuller.

Bound for Mars: Countdown to First Interplanetary Launch from California

In the early morning hours of May 5, millions of Californians will have an opportunity to witness a sight they have never seen before - the historic first interplanetary launch from America's West Coast. On board the 189foot-tall (57.3-meter) United Launch Alliance Atlas V rocket will be NASA's InSight spacecraft, destined for the Elysium Planitia region located in Mars' northern hemisphere. The May 5 launch window for the InSight mission opens at 4:05 am PDT (7:05 EDT, 11:05 UTC) and remains open for two hours. https://www.jpl.nasa.gov/news/news.php?feature=7095

NASA just greenlit a satellite concept straight out of Star Wars

NASA has just greenlighted a project from Cornell University that is truly mind-blowing: a satellite capable of being launched into space in tiny segments, which can then navigate autonomously to a point and selfassemble. The idea is part of the NASA Innovative Advanced Concepts programme and will be led by the university's Prof Dmitry Savransky and a team of 15 other researchers in the programme's first phase. https://www.siliconrepublic.com/machines/nasa-satellite-star-wars

Key Parker Solar Probe sensor bests sun simulator—last launch hurdle

With old IMAX projector bulbs, Michigan Engineers simulate the sun.

You don't get to swim in the sun's atmosphere unless you can prove you belong there. And the Parker Solar Probe's Faraday cup, a key sensor aboard the \$1.5 billion NASA mission launching this summer, earned its stripes last week by enduring testing in a homemade contraption designed to simulate the sun. http://bit.ly/2FBM6wT

May Sky Data

5

Planet Summary

Mercury reached greatest elongation east from the Sun on April 29th and might just be glimpsed low above the western horizon for the first few days of May, but, for the remainder of the month will lie too close to the Sun to be visible.

Venus shines brightly at magnitude -3.4 all month with an angular size of 11.5 increasing to 13 arc seconds. Venus rises a little higher in the sky as May progresses, initially setting around two hours after the Sun but increasing to two and a half hours by month's end as its elevation at sunset stays at around 20 degrees - it will be very prominent in the evening sky.

Mars starts the month in Sagittarius and moves into Capricornus in mid-May. Now a morning object, it rises at around 1:00 am at the start of the month and a little before midnight by May 31st. During the month, its magnitude increases rapidly from -0.2 to -1.0 as its angular size increases from 11.1 to 15.1 arc seconds, so it should be possible to spot details, such as Syrtis Major, on its salmon-pink surface with a small telescope.

Jupiter reaches opposition on May 8th, so will be visible all night. It shines at magnitude -2.0 and has a disk some 44 arc seconds across throughout the month. Jupiter's equatorial bands and sometimes the Great Red Spot and up to four of its Gallilean moons will be visible in a small telescope.

Saturn rises at around midnight on the first of May and a couple of hours earlier by month's end. It climbs higher before dawn and so becomes easier to spot as the month progresses. The rings were at their widest some months ago and are still, at 25 degrees to the line of sight. Lying in Sagittarius, it is close to the topmost star of the 'teapot'. It will been seen best just before dawn.

The peak of the Eta Aquarid **meteor shower**, when the most meteors are visible, should happen before dawn on May 7. Rates this year can reach 15-20 meteors per hour during that time, but may be washed out by moonlight.

Planet, Sun, and Moon data calculated for local time at Lancaster, CA

To use the chart, go outside within an hour or so of the time listed and hold it up to the sky. Turn the chart so the direction you are looking is at the bottom of the chart. If you are looking to the south then have 'South horizon' at the lower edge.

Suggested Observing List

The list below contains objects that will be visible on the night of the AVAC Star Party. The list is sorted by the transit time of the object.

Desert Sky Observer

A.V.A.C. Information

Membership in the Antelope Valley Astronomy Club is open to any individual or family.

The Club has three categories of membership.

- Family membership at \$30.00 per year.
- Individual membership at \$25.00 per year.
- Junior membership at \$15.00 per year.

Membership entitles you to...

- Desert Sky Observer–monthly newsletter.
- The Reflector the publication of the Astronomical League.
- The A.V.A.C. Membership Manual.
- To borrow club equipment, books, videos and other items.

AVAC P.O. BOX 8545, LANCASTER, CA 93539-8545

Visit the Antelope Valley Astronomy Club website at www.avastronomyclub.org/

The Antelope Valley Astronomy Club, Inc. is a 501(c)(3) Non-Profit Corporation.

The A.V.A.C. is a Sustaining Member of The Astronomical League and the International Dark-Sky Association.

Board Members

President:

Frank Moore (661) 972-4775 president@avastronomyclub.org

Vice-President:

Vacant vice-president@avastronomyclub.org

Secretary: Rose Moore (661) 972-1953 secretary@avastronomyclub.org

Treasurer: Rod Girard (661) 803-7838 treasurer@avastronomyclub.org

Director of Community Development: Robert Lynch, Jr. community@avastronomyclub.org

Appointed Positions

Newsletter Editor: Steve Trotta (661) 269-5428 dso@avastronomyclub.org

Equipment & Library: Vacant library@avastronomyclub.org

Club Historian: Tom Koonce (661) 943-8200 history@avastronomyclub.org

Webmaster:

Steve Trotta (661) 269-5428 webmaster@avastronomyclub.org

Astronomical League Coordinator: Frank Moore (661) 972-4775 al@avastronomyclub.org
